Clubfoot: Treatable with Ponseti Method

Facts on Clubfoot

- Clubfoot is a congenital deformity that may affect one or both feet.
- The affected foot or feet are rotated internally.
- Without treatment, people with clubfoot often walk on the sides or back of their feet.
- It is a relatively common birth defect occurring in about one in every 1000 live births.

With Ponseti treatment, patients are pain-free, wear normal shoes, and are able to walk and participate in sports.

Approximately half of the time, clubfoot occurs in both feet. Correction maintained with Brace.
